

What do we mean by inclusion health?

Reducing health inequalities through a focus on the
most disadvantaged and excluded groups

Helen Johnston, Consultant in Public Health

Types of health inequalities

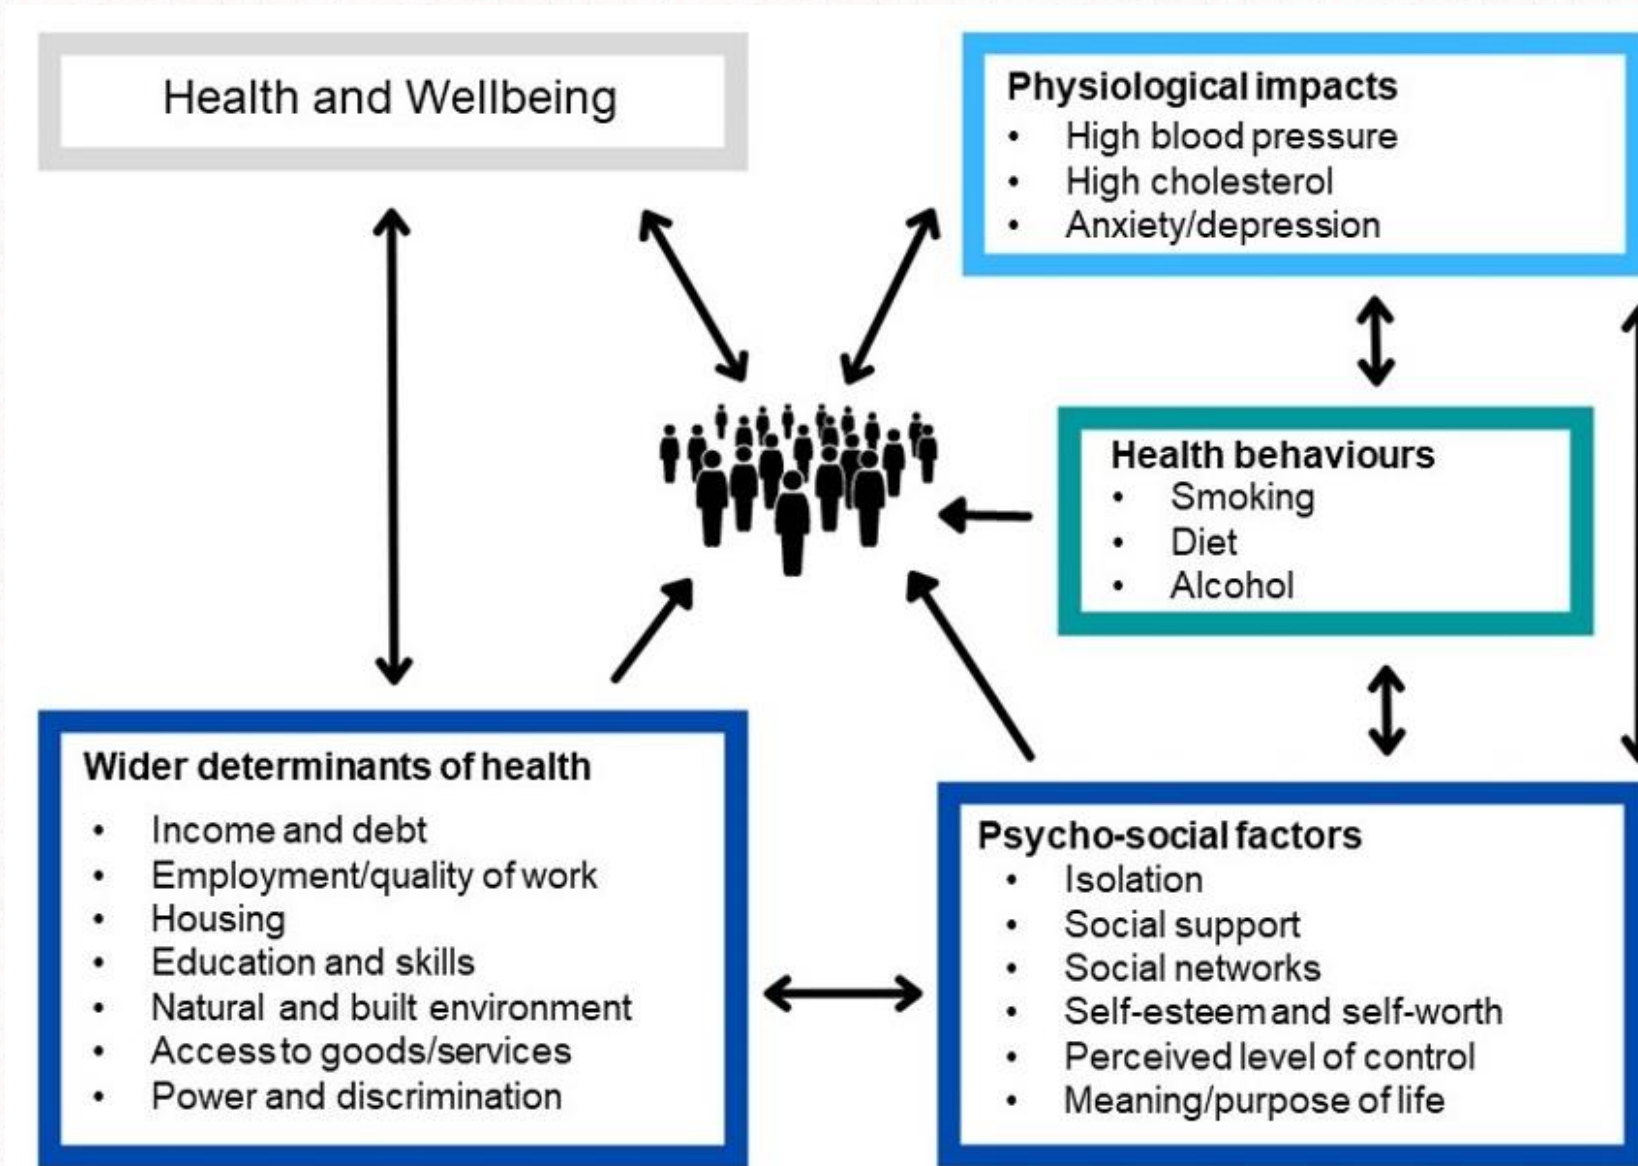

Health inequalities are **differences in people's health** that are **systematic, avoidable, and unfair**.

Promoting **equity** because 'one size doesn't fit all'

Inclusion health as one of the 4 domains of health inequality (OHID, 2022)

The causes of health inequalities

System map adapted from the Labonté model, PHE 2021

Adversity and trauma

Adverse experiences and childhood trauma

- associated with poorer mental and physical health¹
- associated with lack of trust of healthcare professionals²
- associated with multiple disadvantage³

1. Young Minds; 2. Bellis et al. 2024;
3. Bramley et al., 2015.

HOW DOES IT IMPACT THE LIVES OF YOUNG PEOPLE?

ACEs impact a child's development, their relationships with others, and increase the risk of engaging in health-harming behaviours, and experiencing poorer mental and physical health outcomes in adulthood.

Compared with people with no ACEs, those with 4+ ACEs are:

Inclusion health groups have higher mortality rates

And higher use of services and earlier age of death

People experiencing homelessness use about **4 times more** acute hospital services

The annual cost of public services is higher for people who are homeless

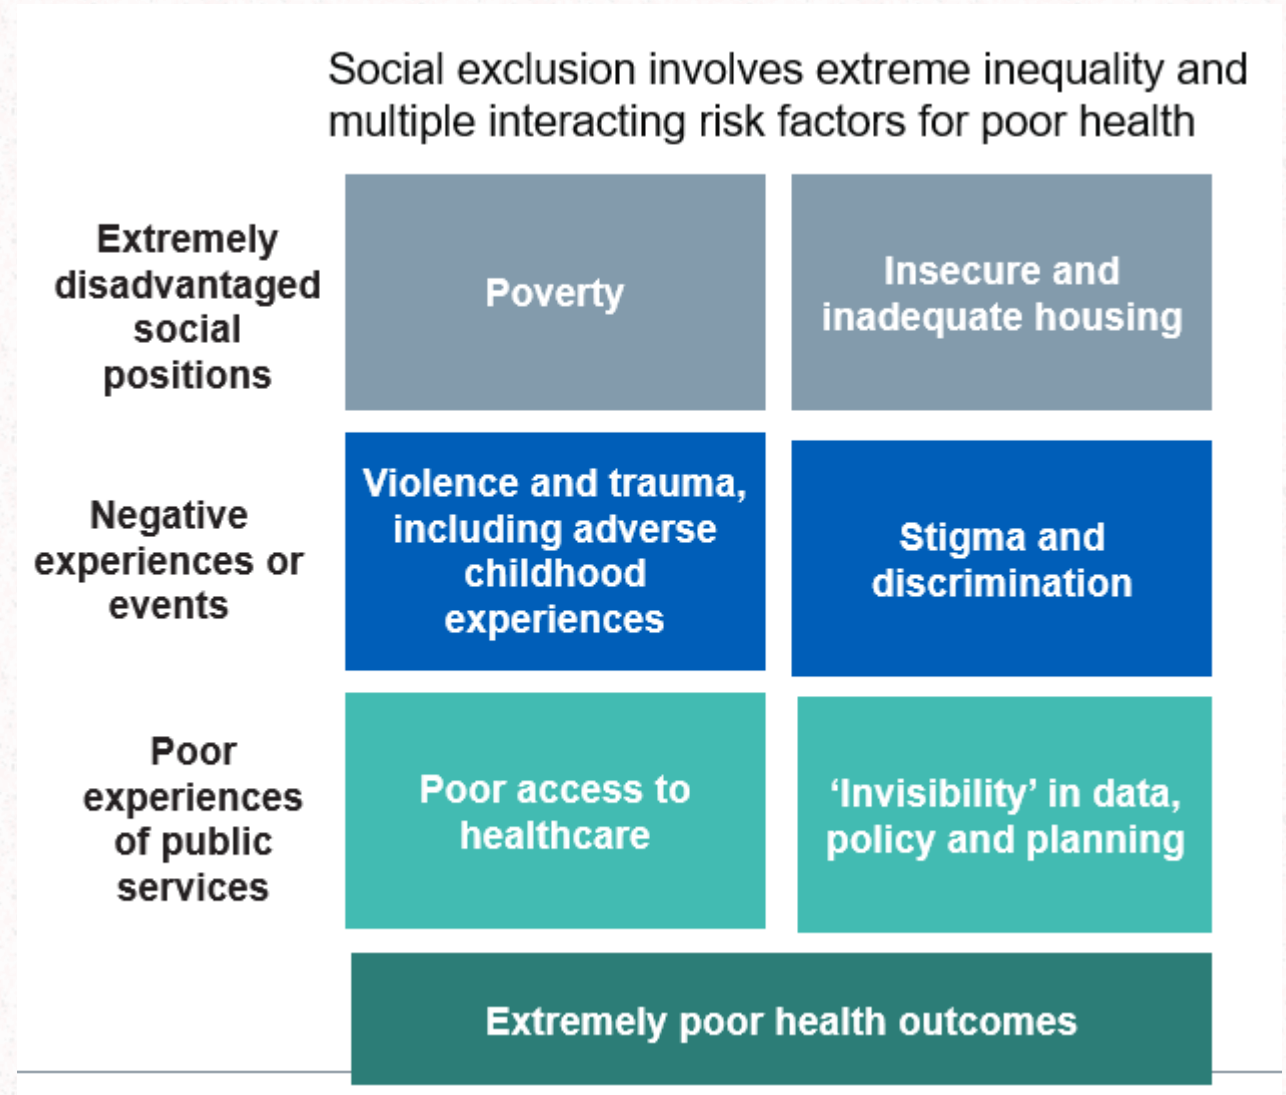

- £12,260 for a person sleeping rough
- £3,100 for an average adult

Average age at death of people experiencing homelessness compared to the general population

Who are our inclusion health groups?

- People who experience homelessness and rough sleeping
- People in contact with the criminal justice system
- Vulnerable migrants
- People dependent on drugs or alcohol
- Gypsy, Roma, and Traveller communities
- Sex workers
- Victims of modern slavery

From the NHS Inclusion Health framework

REDUCING HEALTHCARE INEQUALITIES

CORE20
The most deprived 20% of the national population as identified by the Index of Multiple Deprivation

The **Core20PLUS5** approach is designed to support Integrated Care Systems to drive targeted action in healthcare inequalities improvement

REDUCING HEALTHCARE INEQUALITIES FOR CHILDREN AND YOUNG PEOPLE

CORE20
The most deprived 20% of the national population as identified by the Index of Multiple Deprivation

The **Core20PLUS5** approach is designed to support Integrated Care Systems to drive targeted action in healthcare inequalities improvement

Target population

CORE20 PLUS 5

Key clinical areas of health inequalities

PLUS
ICS-chosen population groups experiencing poorer-than-average health access, experience and/or outcomes, who may not be captured within the Core20 alone and would benefit from a tailored healthcare approach e.g. inclusion health groups

PLUS
ICS-chosen population groups experiencing poorer-than-average health access, experience and/or outcomes, who may not be captured within the Core20 alone and would benefit from a tailored healthcare approach e.g. inclusion health groups

1

ASTHMA
Address over reliance on reliever medications and decrease the number of asthma attacks

2

DIABETES
Increase access to Real-time Continuous Glucose Monitors and insulin pumps in the most deprived quintiles and from ethnic minority backgrounds & increase proportion of children and young people with Type 2 diabetes receiving annual health checks

3

EPILEPSY
Increase access to epilepsy specialist nurses and ensure access in the first year of care for those with a learning disability or autism

4

ORAL HEALTH
Address the backlog for tooth extractions in hospital for under 10s

5

MENTAL HEALTH
Improve access rates to children and young people's mental health services for 0-17 year olds, for certain ethnic groups, age, gender and deprivation

5

HYPERTENSION CASE-FINDING
and optimal management and lipid optimal management

SMOKING CESSATION
positively impacts all 5 key clinical areas

Linking up the descriptions

Severe Multiple Disadvantage

A combination of **three or more disadvantages**: homelessness, problematic substance use, mental-ill health, domestic and sexual violence or abuse, and interaction with the criminal justice system.

Multiple Exclusion Homelessness

The overlap between **homelessness and other forms of deep social exclusion**: 'a distinctive and exceptionally vulnerable subgroup within the broader homeless population'.

High Intensity (or Frequency) Users

A focus on **individuals aged 18 and over who attend an Emergency Department more than expected**.

How does a focus on inclusion health help locally?

Bringing together several together several population groups in the 'Inclusion Health' agenda allows a focus on

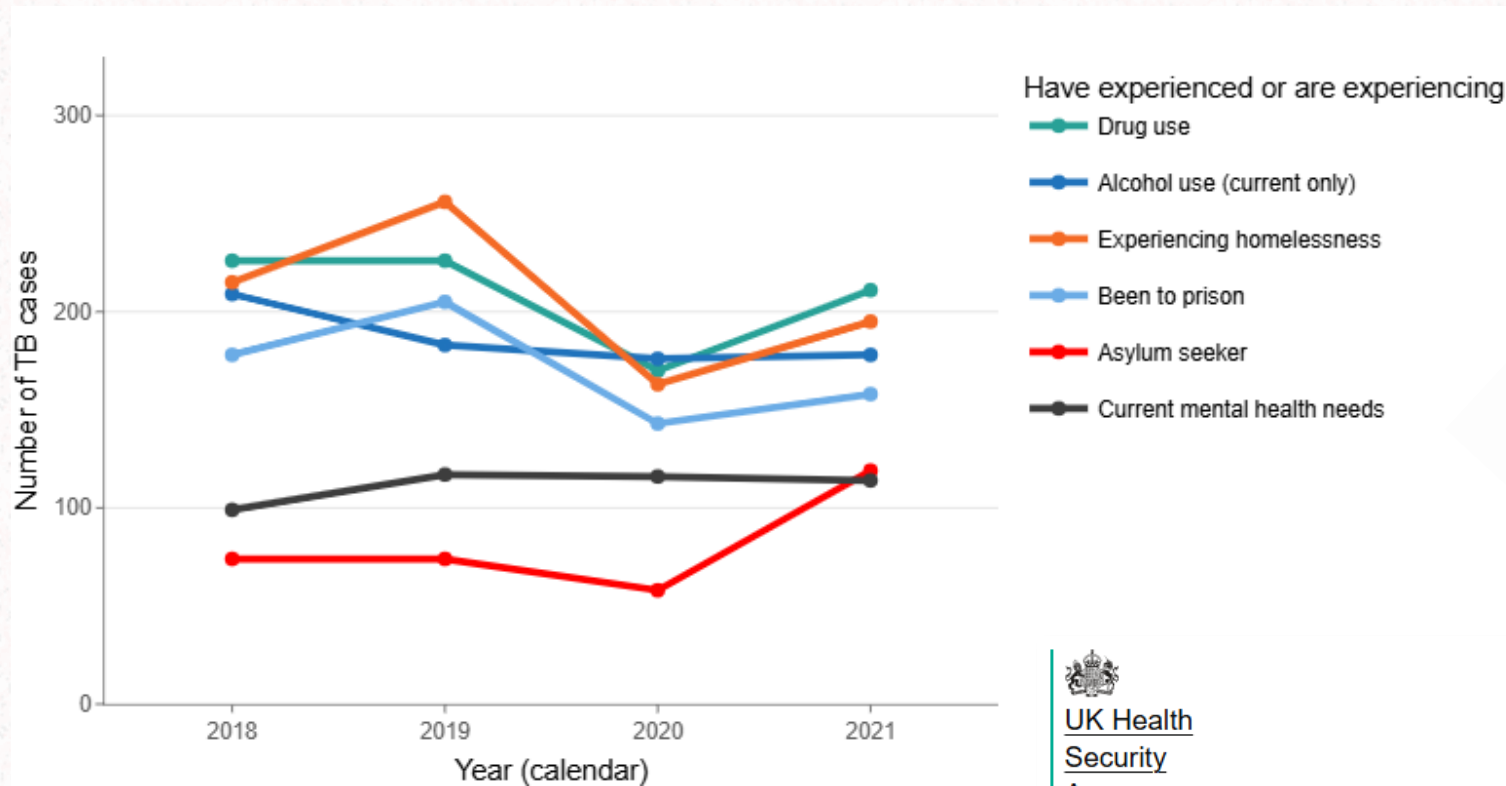

- the groups' **shared experiences** of exclusion
- the **similarities of the disease burdens** they face
- the common **psychological consequences of exclusion**
- the growing evidence base that **the most successful service responses to these needs themselves share a wide range of characteristics**

from Groundswell Pockets of Excellence report

Importantly,

- ❑ There may still be **specific tailored needs**
- ❑ There may be **intersectionality** with other personal characteristics
- ❑ And the list of groups isn't to be seen as exclusive: **inclusion health applies to any highly marginalised group with extremely poor health**

Drawing on data, evidence and guidance

Percentage of tuberculosis (TB) cases in England occurring in people who have one or more social risk factors

Focusing on effective interventions

Detailed in Luchenski et al (2018)

Working differently to meet multiple needs

1. Bringing multiple services together

2. Offering preventative services for common conditions

3. Prioritising trauma informed support as an enabler of care

“there is evidence that **trauma-informed approaches improve people’s experiences of services and enhance engagement** – a prerequisite for achieving other outcomes.”

DLUHC Rapid Evidence Assessment (2023)

4. Strengthening the focus on the most excluded children

Drawing this together: a definition of inclusion health

“Inclusion Health is **a research, service and policy agenda** that aims to redress the extreme health and social inequities among the most vulnerable and marginalised in a community.

Those who are living on the margins of society are too often poorly served. We believe that care must be tailored to reflect the particular needs of each patient, with clinicians addressing the patient’s total health, care and social needs. Whilst **many people experiencing deprivation will face the health impact of inequality, this impact is particularly acute for the most marginalised**. People in this situation may include people experiencing homelessness, vulnerable migrants, sex workers, Gypsies and Travellers and those in contact with the criminal justice service.”

Joint Statement, The Academy of Medical Royal Colleges and the Faculty for Homeless and Inclusion Health, 2017

Focussing on the NHS inclusion health principles

The five principles offer a systematic approach to:

1. Commit
2. Understand
3. Develop
4. Deliver
5. Demonstrate

The opportunity is to apply these locally

This conference is an invitation

To consider...

- ❑ **Stories of change**
- ❑ **Change agents**
- ❑ **Sustaining change**
- ❑ **Ingredients of success**

Make the most of the opportunity to:

- ❖ **Connect with others**
- ❖ **Pose your questions**
- ❖ **Reflect on your learning**
- ❖ **Explore the actions that you can take**
